Sample Test Question and Explanation

Question:

During a pressure integrity test of an IADC well cap, the system is pressurized to 1.5 times the maximum expected operational pressure. The test duration is set at 30 minutes. What is the primary purpose of pressurizing the well cap beyond operational levels, and which standard best practices should be followed during this test?

Answer Options:

A) To simulate worst-case scenarios; ensure the test pressure is maintained without leakage for the entire duration.

B) To check the maximum mechanical strength; gradually increase pressure until failure.

C) To verify the seal material?s elasticity; perform rapid pressure cycles.

D) To test the corrosion resistance; expose the well cap to chemical agents under pressure.
